# DIY 2D Lantern - Instructions

1. Print out this sheet
2. Cut around the dotted lines to create your lantern template
3. Trace the template onto your chosen paper for your lantern and cut out
4. Use the greyed-out area on the template to sketch your lantern design
5. Once you've decided on your design there are a few ways to transfer it to your lantern:
   - Cut out the shaded shape on the template from your lantern. Draw your design onto light tissue paper (the same size as the shaded shape on the template) using felt tip pens, stick this to your final lantern.
      - Cut the design straight out of the lantern to create a silhouette effect. Cover the back of your lantern with coloured tissue paper for the light to shine through.
6. Cut out the Scarborough Lights logo from the bottom of this sheet and stick to your final lantern.
7. Stick your lantern in your window

TOOLS NEEDED:

- Scissors
- Craft knife
- Glue Stick
- Paper to make your lantern from (black sugar paper works well at blocking out the light)
- Coloured paper to fill in the design (tissue paper works well as it lets through the light)

TOP TIPS

If using a craft knife don't forget to put a chopping board underneath so you don't damage any surfaces
